

CLEAN, HEALTHY & SUSTAINABLE

Mattresses that have been washed.

Investments in the hygiene of the hotel bed and the sleep quality of the guests are just as essential as an environmentally conscious use of resources. With its mattresses, pillows and services, SWISSFEEL meets the highest standards of hygiene and sustainability, as well as product quality and comfort.

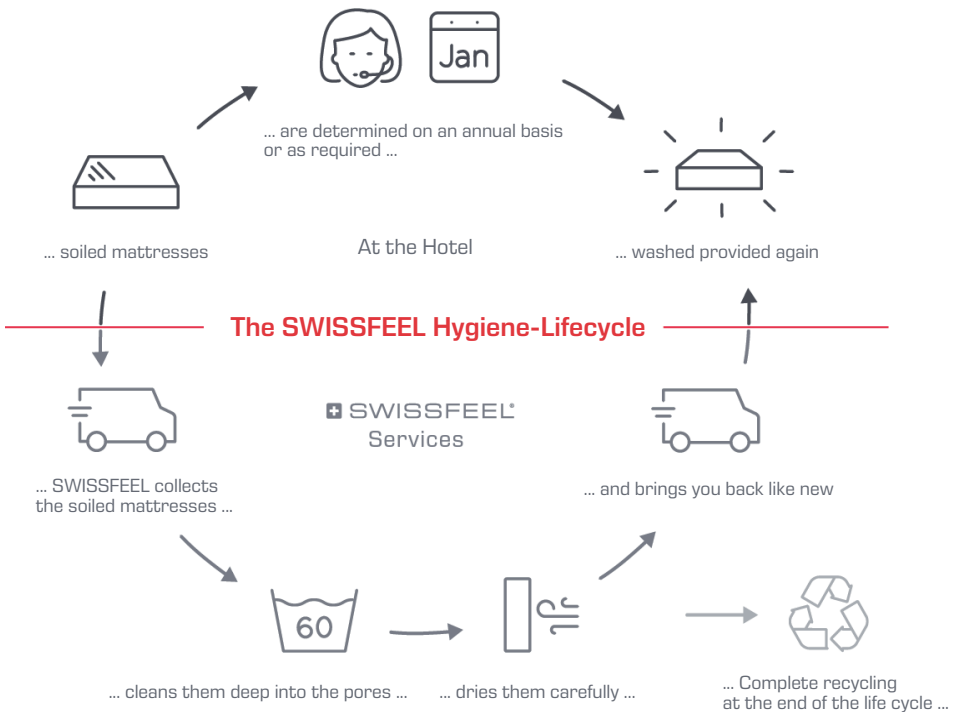

The Product.

Material

SWISSFEEL products are made of special thermoelastic Swiss mineral foam. Thanks to the unique manufacturing technology and the use of high quality materials, the mattresses and pillows are OEKO-TEX® certified and fully washable without compromising ergonomic functionality or breathability.

Hygiene and health

The full mechanical-thermal washing process using water and detergent is the only process that washes mattresses hygienically. A washed mattress is hygienically like a new mattress. The SWISSFEEL washing process reliably removes mites and mite excrement, hair, dandruff, sweat and other body fluids as well as bacteria (and viruses) from the mattress core and cover. This makes the products suitable not only for allergy sufferers, but for all those who count on purity when sleeping. At the end of their useful life, SWISSFEEL mattresses and pillows can be completely recycled. This relieves the environment and conserves resources.

Service from a single source

SWISSFEEL products are made of special thermoelastic Swiss mineral foam.

Thanks to the unique ma

SWISSFEEL is the first manufacturer in the world to offer the appropriate cleaning process for its range of washable pillows and mattresses. This means that the entire mattress management can be covered by one partner.

The mattresses are picked up directly from the company, taken to be cleaned and returned clean within a short period of time - so that a pore-clean bed awaits every guest.

Flexible investment opportunities

Conventional acquisition

SWISSFEEL offers attractive conditions for the purchase of mattresses, especially for higher quantities.

Rental solution

Analogous to hotel rental linen, the products incl. laundry service can also be rented as a package, cost-transparent and budget-friendly.

Swap instead of pay

Your way to a cost-neutral investment. Under the motto "swap instead of pay", the entire mattress and pillow assortment of a hotel can be exchanged for existing vacancies without any investment burden. The transaction is handled by our partners Hoxami.

The economic efficiency

The process used guarantees protection of the material, leaves no residue and thus significantly extends the period of use. Thus, the mattress remains not only clean and comfortable in the long term, but also an economically sound investment.

Sustainability.

From the procurement of resources to the recycling of materials, ecologically responsible action is a central theme at SWISSFEEL. In the entire process chain, we pay attention to the conscious use of resources.

A SWISSFEEL mattress can be used for about 15 years through regular washing and thus has twice the life span of conventional mattresses, which usually end up in the incinerator after about 8 years. This is different with SWISSFEEL: Here, mattresses are taken back at the end of their life cycle in order to recycle the cover and foam into other products. This saves resources and gives the certainty to relieve the environment.
